

BUILD AUTOMATION TOOL:

WEB AND PANEL VERSION:

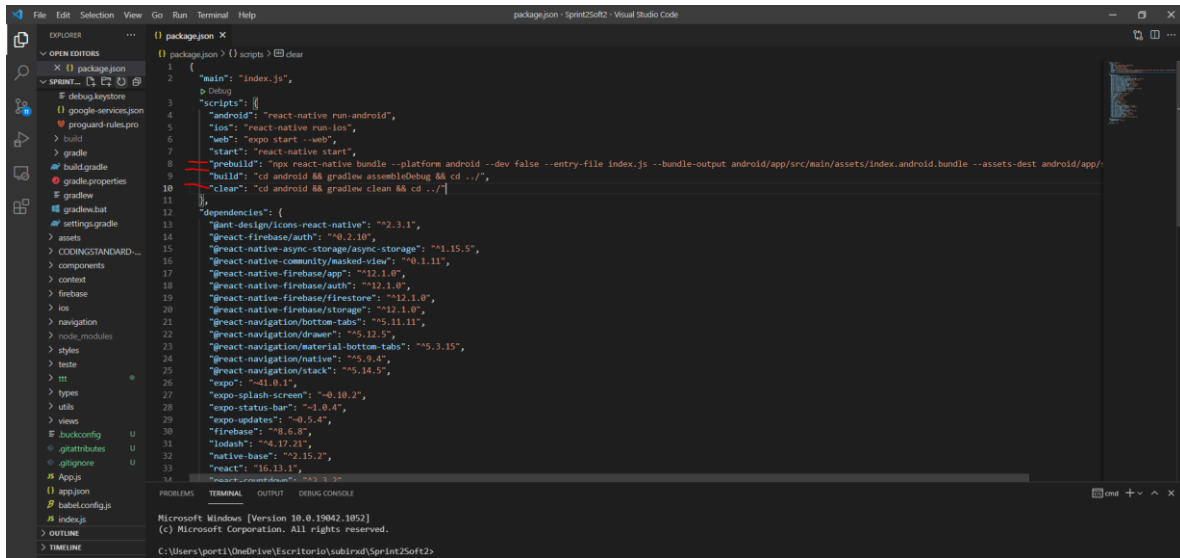

1. Go to the main folder of the project
2. Eject the command “npm run build”
3. Put the command “npm install -g serve”
4. After that, eject “serve -s build”
5. Then you can comprobate in localhost:5000 that your project is running

APP MOBILE:

1.Configure this in your package.json file

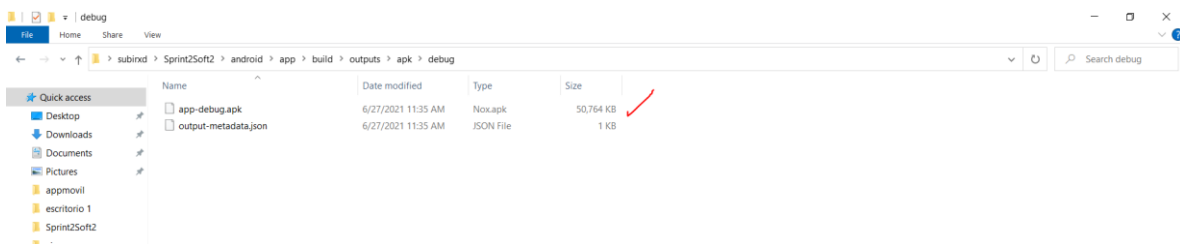

```
"prebuild": "npx react-native bundle --platform android --dev false --entry-file index.js --bundle-output android/app/src/main/assets/index.android.bundle --assets-dest android/app/src/main/res",
"build": "cd android && gradlew assembleDebug && cd ../",
"clear": "cd android && gradlew clean && cd ../"
```

2. run this command “npm run clear”

3. Create a empty folder called “assets” in /android/app/src/main folder of your project

4. run this command “npm run build”

5. Wait for the build, and then we get the APK

5.Run the APK in your android device
